

ABSTRACT

Title: Case study of a patient with the diagnosis of burns II.–III. grade to 40% of body

Objectives: The main goal of this bachelor thesis is to work out a detailed case study of rehabilitation care of a patient with burns and literature search of this topic. Another goal is to acquire comprehensive teoretic and practical knowledge about this diagnosis.

Methods: I used assay and physiotherapeutic approaches which I learned during the bachelor studies at FTVS UK. The general part informs about anatomy and physiology of the skin, about diagnostics of degree and extent of burns, methods of treatment, physical and psychological rehabilitation. Special part includes methodology of the work, anamnesis, opening kinesiologic analysis, individual therapies, outcoming kinesiologic analysis, the effect of the therapy and end.

Results: I worked out a detailed case study of a patient with this diagnosis and a literature search has been worked out. The main contribution of the work was the possibility to gain new experiences and knowledge to this diagnosis.
